

Lifeblood at Work.

The idea: Focus on the result.

We plan and build factories. We optimise warehouses. We modernise processes. We ensure that production and logistics locations run smoothly. Nationally and internationally. Safely, reliably and striving for success. We are Metroplan. As one of the leading technical consulting and planning companies, we implement comprehensive solutions for customers from different sectors. We see ourselves as the engineers of our customers' success. Our focus is on you and the best possible result. Let's shake on it.

How we work.

We advise passionately across a range of disciplines and have a great deal of expertise in all phases of planning and implementation. Our results are always founded on solid analysis and hard facts. This creates security in investment decisions and forms a prerequisite for your long-term success.

Seeing eye to eye. With you.

The right partner is crucial to the success of a project! We combine two aspects for excellent project success: On the one hand, a partnership at eye level. We believe that team spirit, openness and reliability in the project are the essential criteria for success. On the other hand, we focus on the result. We deliver! Using well-founded methods and expertise, we create added value for companies and employees.

Our focus: Three clear performance areas.

Consultancy and design

- Production and distribution networks
- Location analysis and selection
- Factory/warehouse structure planning/ Feasibility analysis
- Factory, warehouse and material flow design
- Building design for warehouse and factory
- Make or Buy analysis

Planning and implementation

- Detailed planning
- Preliminary/draft planning
- Approval planning
- Tendering, designing and awarding of contracts
Technology and property
- Implementation monitoring/
Site management
- Operational start-up
- Warranty management

Optimisation and increasing efficiency

- Increasing efficiency in production and warehousing (technology, organisation, people)
- Continual performance monitoring
- Modernisation, Re-engineering
- Optimisation of construction and workflow organisation
- Location searches and sourcing in Eastern Europe

Our three performance areas are broadly diversified. In addition, we combine all necessary disciplines under one roof and support our customers throughout all project phases through to successful implementation. Forming the basis for this is our experience from a multitude of different projects.

Global projects.

Over four decades we have implemented projects all over the world. To maintain competitiveness, companies must tackle global challenges. We can support you – nationally or internationally. We offer particular expertise in opening up new markets and beginning production in Eastern Europe. To do this, we have developed a strategy-based system that supports the expansion plans of our customers: the right way.
